

Note on entering files into R.

1. Before starting R: Create a directory within your home directory entitled “nonparam”. Create a directory within this “nonparam” directory entitled “lab1”. Download any files from the tutorial or other source into this “lab1” directory.
2. After starting R, use the “change dir...” option under the “file” menu item to change the directory to “lab1” within the “nonparam” folder.
3. Now you can use commands like

```
x=scan("rain.txt")
```

to enter data or those mentioned in the tutorial.
